

Equine

Test	Samples	Min Volumes**	Test set up	Maximum Expected Turnaround	Notes
VNT - Antibody Test Equine Viral Arteritis (EVA)	Serum Plasma <i>Whole blood*</i>	200µl	Monday Wednesday Friday <i>Additional test days in busy period</i>	3-5 working days	Please indicate if animal has been vaccinated against EVA (expected positive) or EHV (likely to be toxic).
ELISA - Antibody Test Equine Viral Arteritis (EVA)	Serum Plasma <i>Whole blood*</i>	250µl (50µl for ELISA + rest for any VNT)	Monday Wednesday Friday	3-5 working days	
AGID Equine Infectious Anaemia (EIA)	Serum Plasma <i>Whole blood*</i>	100µl	Monday Tuesday Wednesday Thursday	2 working days	
ELISA - Antibody Test Strangles <i>(Streptococcus equi equi)</i>	Serum Plasma <i>Whole blood*</i>	20µl	Tuesday Thursday	4 working days	
Bacterial Detection - PCR Strangles <i>(Streptococcus equi equi)</i> <i>(Streptococcus equi zooepidemicus)</i>	NP or GP Swab Guttural Pouch fluid	1 swab 1ml fluid	Monday (O/N) Wednesday (O/N)	4 working days	NP = Nasopharyngeal swab GP = Guttural Pouch swab Samples required prior to 9am on the test day

*Whole blood can be sent for antibody tests but at least double the volume mentioned for serum/plasma must be sent.

**The volumes indicated are for each individual test, for samples that require multiple tests you must add the volumes for each test

µl = microlitre. 1000µl = 1ml (1 millilitre)
